CAREER OBJECTIVE

Aspiring software developer seeking to leverage my expertise in coding, problem-solving, and innovative technology solutions to contribute to dynamic projects, drive digital transformation, and advance my career in a collaborative and growth-oriented environment.

PROJECT

SCHOOL MANAGEMENT SYSTEM

USING JAVA

This project is for multilevel users like Admin, Teacher and Student. It provides a login system with registration. Students can see notice board, results, attendance, etc. Teachers can submit results, daily attendance, etc. and Admins can add new students and teachers, create new sessions, and classes.

BANK MANAGEMENT SYSTEM

USING PYTHON

The project is about a basic banking system implemented in Python using an object-oriented approach. The system is encapsulated within a class called Bank, which manages various banking operations such as creating a new account, displaying account details, making deposits, and withdrawing funds.

PASSWORD GENERATOR

USING JAVA

A password generator in Java is a program designed to create random and secure passwords based on specified criteria. The generated passwords can include a combination of uppercase and lowercase letters, digits, and special characters to ensure a high level of security. The password generator can be customized to meet specific requirements such as length and character composition.
